Dear WASI customer,

this is the new WASI NORM product catalogue. It contains stainless steel fasteners according to DIN, EN, and ISO as well as non-standard fasteners that we have defined for you with WASI in-house standards. This represents our product range which is available for you at both of our logistics locations.

If you cannot find something in this WASI NORM product catalogue, please contact us. Our other product lines SPEZIAL, SOLAR and MARITIM provide the appropriate

We are laying a foundation for your success with the assortment presented in this catalogue. In addition to the other three product lines, you can also expect a comprehensive service package which eases your purchasing management from WASI, your system partner.

Everything of interest about WASI, such as our logistics and IT service solutions, is also outlined in this catalogue. At the end of the catalogue you will find our new technical manual with comprehensive information about

Dirk Kiele-Dunsche,
Managing Director

WASI fastening solution for any application. In addition to the standard programme, we also deliver custom products to meet your requirements.

We have revised the catalogue focusing on simpler navigation so that you can easily find the right fastener from our comprehensive range. The items are organised according to the DIN standard for the most part. You can also find our product database on the internet at www.wasi.de, which quickly helps you find the right stainless steel fastener.

stainless steel fasteners. This is an extremely interesting resource and contains all the information that you need to purchase stainless steel fasteners.

Do you have any questions about our products or services? We will gladly discuss any questions with you. Just give us a call! Our contact details can be found on the enclosed sheet with our contact persons and our service hours.

Kind regards from Wuppertal,

Dirk Kiele-Dunsche

WASI – the strong performance system partner

Our business specialises in stainless steel fasteners and is a worldwide market leader in the sale of corrosion resistant fasteners from A1 to A5 in all property classes. WASI was founded in 1961 by Emil Wagener and Werner Simon. Over the years, the business was changed and expanded significantly. A two-man wholesaler has become a business with over 200 employees. National and international traders and industrial companies have relied upon excellent service and superb and fast delivery capabilities for decades. To

Our six system foundations

- The WASI product lines
- The WASI quality promise
- The WASI logistics concept
- The WASI service
- The WASI-IT link – the best connection
- The WASI competence team

Old location
Emil-Wagner-Straße

equip ourselves for globalisation and further growth, we are presenting ourselves on the market with an innovative two-location logistics concept. In this way, we can react quickly and flexibly to your requests, sell high volumes and offer you individual delivery service. As a system partner, we fulfil requests for products and particularly for purchase management services for each of our customers.

The WASI product lines

Our product range comprises several thousand continuously stocked items. It also contains intermediate sizes and custom dimensions. Should the perfect fastener not be available, we will assist you as a competent solution provider. This includes support from joint product development up to mere purchasing. The worldwide supplier network always offers appropriate options for delivery times, quality and prices.

The WASI product lines

WASI NORM carries corrosion resistant stainless steel fasteners from A1 to A5 in all property classes and from a variety of special materials. The assortment comprises standardised items of all kinds including DIN, EN or ISO and all typical international and WASI in-house standards. This includes, among others, screws, nuts, rings, washers, safety sheets, pins, rivets, threaded rods and hose clamps.

WASI MARITIM offers selected premium stainless steel products that are used principally in water sports. This includes anchors, chains, bollards, deck fittings such as clamps, railings, locks, closures, hooks, hinges, wire cables of all kinds, clamping elements such as clamping locks, terminals, clamps, thimbles, blocks, turnbuckles and forged shackles. In addition, the elements of this product line are implemented into farm-

New location
WASI Straße

WASI SPEZIAL supplies all fasteners not in the standard programme. This includes custom fasteners and DIN-like parts and all customer specific drawing parts from many materials and with special surface treatments. In addition to conventional and CNC turned, milled and lengthwise machined parts, the service also includes stamped, bent and laser parts and cold and warm forging with multi-level presses. Patented height adjustable elements additionally enable ideal adjustment, alignment and levelling of machines. Request our set up technology catalogue.

ing and gardening construction, architecture, the food industry and sewage technology. Request our Maritim catalogue.

WASI SOLAR produces and supplies assembly systems and solutions for solar / photovoltaic systems for all typical roof constructions and for open air systems with the corresponding accessories, also individual according to customer drawings. Request our solar programme.

Each product catalogue can be easily and quickly downloaded at www.wasi.de / Downloads!

The WASI quality promise

The certification according to the international standard DIN EN ISO 9001

guarantees that we act according to a worldwide approved quality management system with standardised processes. We maintain detailed quality checks in our in-house labs to determine material specific properties of all low to high alloyed iron, steel, non-ferrous and other metal fasteners. Included in the test media are:

For example, the chemical composition of materials is tested with the spectrum analyser, the tensile testing machine checks the material properties or the contourgraph checks the dimensional tolerances, in particular for custom items and individual customer drawing parts. The analysis results are given to our customers with the specifically created test certificate following DIN EN 10204.

X-ray fluorescence analyser, tension compression testing machine, contourgraph, profile projector, thread gauges and spectrum analyser.

In our assortment you also get construction control board approved or TÜV certified fasteners. Alternatively, we offer items from screws and nut manufacturers with AD 2000 - W2 and TRD 106 certification.

Test certifications available to you:

Type		Contents of certification
2.1	Declaration of compliance with the order	Certification, in which we confirm that the delivered products meet the order requirements, without details of test results.
2.2	Test report	<p>Certification, in which we confirm that the delivered products meet the order requirements, without details of non-specific test results.</p> <p>Please take into consideration that non-specific tests could mean that samples were taken from your delivery.</p>
3.1	Inspection certificate	<p>Certification, in which we confirm that the delivered products meet the determined order requirements, with details of test results from specific tests.</p> <p>Test results from available test certificates could also be used.</p> <p>We ensure traceability of the corresponding certificates.</p> <p>Please take into consideration that specific tests could mean that samples were taken from your delivery.</p>
3.2	Inspection certificate	<p>Certification, in which we and also the acceptance personnel of the purchaser confirm that the delivered products meet the determined order requirements, with details of test results from specific tests. Test results from available test certificates could also be used.</p> <p>We ensure traceability of the corresponding certificates.</p> <p>Please take into consideration that specific tests could mean that samples were taken from your delivery.</p>

The WASI logistics concept

In the last few years, we have made the change from a traditional wholesaler to a sustainable innovation business. Double-digit sales growth, advancing internationalisation and a continuously growing assortment are the basis of our logistical expansion. Growing and always extremely varying customer demands on the purchasing process require a new infrastructure to ensure that we grow with our customers in the future. The arguably clearest and most visible sign of this change is the new logistics concept with two locations,

Logistics with a concept - efficiency is the measure of logistics optimisation

The new distribution centre in Wuppertal Ronsdorf (WASI Straße) offers 10,000 m² of additional covered storage area. Fully-automated high-bay warehouse with pallet and container storage spaces, two picking halls and generous manoeuvring areas is found at outgoing goods. Incoming goods are organised at the old location in Wuppertal Heckinghausen (Emil-Wagener-Straße). Quality testing is done here. Supplies

Emil-Wagener-Straße and WASI Straße and the resulting logistics service options.

Current capacities:

18,000 m ²	Covered storage area
15.000	Pallet storage spaces
150.000	Container storage spaces
200 tons	Outgoing goods per day
15,000 tons	Goods in stock
10,000 pcs.	per day

are stored here in a buffer warehouse until they are required. Large volumes (as full pallets) are sent directly from this location to save time. Goods for the distribution centre are simultaneously prepared here. This ensures effective picking from small packages to sorted and consolidated pallets all the way to single-item pallets or complete containers. This future-oriented logistics concept with two locations forms the basis for flexible and reliable, individual deliveries.

Development perspective and medium-term goals

The latest expansion of our logistics, a fully-automated state-of-the-art and extremely efficient shuttle system is currently being installed. It has a capacity of 35,000 spaces. This expands the distribution centre to a highly dynamic picking and shipping system. A high degree of automation reduces throughput time for differently sized deliveries. The OSR enables high flexibility in controls and ideal utilisation of the entire logistics infrastructure.

Customised logistics services

We thereby supply our customers worldwide from Wuppertal and as a service, the customers of our customers in their name directly with stainless steel fasteners. This concept generates synergy effects for the partnership-like collaboration with our customers. Customers can eliminate their warehouse inventory and focus on their core competencies. Optimising customer purchasing management and thereby reducing customer costs is our declared goal.

The WASI service offer

The performance spectrum is varied and ranges from customer specific packaging, packaging units, deliveries in the name of the customer using barcodes on de-

livery certificates, diversely distinct supply systems up to automatic data transmission.

Product database

Online product search with many technical details (as well as query function)

Online Shop

Online order processing for the entire warehouse assortment

Electronic product catalogue management

BMEcat, CSV, eCl@ss etc.

Interfaces and data exchange

Exchange of business documentation via standardised interfaces

The fastest route for your request:

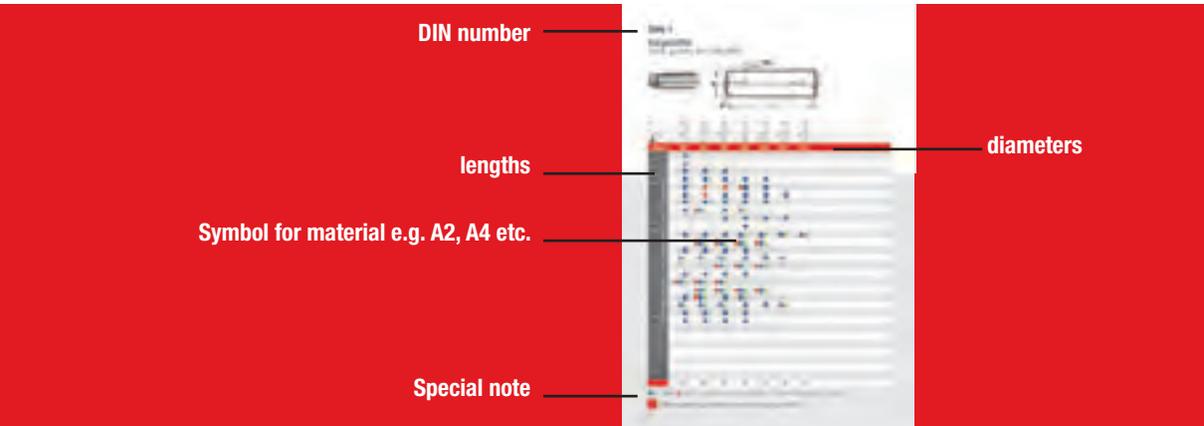

For an appropriate quotation we require

- Quantity: How many pieces do you need?
- Standard: DIN, EN, ISO or WASI
- Material: e. g. A2 or A4
- Dimensions: Diameter and length in mm
- Item designation: e.g. hexagon head screws

Item numbers are combined as follows:

Norm – material– dimensions (for example **912 – 2 – 4x30.**)

This allows us to quickly identify your desired items and enable you to compare them to your requirements.

- Quantities are increased automatically to fit the sales unit.
- Only on explicit request will you receive smaller quantities, however without a price reduction ...
- Minimum order value
- For customised products
Volume tolerance of +/- 10% might apply

facade building screws and screws for thermoplastics

item description	DIN	ISO / DIN EN / DIN EN ISO	WS	page	picture
facade building screws					
Facade building hexagon head, with mounted EPDM-washers Ø16mm, type A			9180	277	
Facade building screws hexagon head, with mounted EPDM-washers Ø19mm, type A			9182	278	
Facade building screws hexagon head with mounted EPDM-washers Ø22mm, type A			9184	279	
Facade building screws hexagon head with mounted EPDM-washers Ø16mm, type BZ			9190	280	
Facade building screws hexagon head, with mounted EPDM-washers Ø19mm, type BZ			9192	281	
Facade building screws hexagon head, with mounted EPDM-washers Ø22mm, type BZ			9194	282	
screws for thermoplastics					
Pan head screws for thermoplastics with cross recess H (Phillips)			9160	263	
Countersunk head screws for thermoplastics with cross recess H (Phillips)			9162	264	
screws accessories and others					
item description	DIN	ISO / DIN EN / DIN EN ISO	WS	page	picture
Caps for cap head screws			9236	296	
Bits for security screws with TX and PIN			9488	360	
L-keys for security screws with TX and PIN			9489	361	
Hose clamps, with worm gear drive, type A, stainless W2	3017 Ø9			194	
Hose clamps, with worm gear drive, type A A4/A2 W4+ W5	3017 Ø9			195	
Hose clamps, with worm gear drive, type A, stainless W2	3017 Ø12			196	
Hose clamps, with worm gear drive, type A A4/A2 W4+ W5	3017 Ø12			197	

Please note that technical differences and deviations in the measurements exist between DIN / DIN EN / DIN EN ISO and ISO. You can find a detailed overview in our technical handbook. The relevant Norms available from stock are highlighted.

nuts and inserts

item description	DIN	ISO / DIN EN / DIN EN ISO	WS	page	picture
Wing nuts, american type	similar to 315 AF			69	
Wing nuts, german type	315 DF			70	
Pipe nuts with pipe thread, type B	431			75	
Hexagon nuts, thin type, type B, with chamfer	439	DIN EN ISO 4035		81	
Hexagon nuts with fine thread, thin type, type B, with chamfer	439	DIN EN ISO 8675		82	
Hexagon nuts with left hand thread, thin type, type B, with chamfer	439			83	
Knurled thumb nuts, high type	466			91	
Knurled thumb nuts, thin type	467			92	
Slotted round nuts	546			97	
Round nuts with drilled holes in one face	547			98	
Square nuts	557			101	
Square thin nuts	562			102	
Lifting eye nuts	582		9582	105	
Hexagon cup nuts, thin type	917			131	
Square weld nuts	928			134	
Hexagon weld nuts	929			135	
Hexagon nuts	934	DIN EN ISO 4032		148	
Hexagon nuts according to AD2000-W2	934	DIN EN ISO 4032		149	
Hexagon nuts with fine thread	934	DIN EN ISO 8673		150	
Hexagon nuts with left hand thread	934			151	
Hexagon nuts UNC thread	934			152	
Hexagon nuts, A2 with strenght 80	934	DIN EN ISO 4032		153	
Hexagon nuts, special materials 1.4462, 1.4529, 1.4539 and 1.4571	934	DIN EN ISO 4032		154	
Hexagon nuts	934	DIN EN ISO 4032		155	

Please note that technical differences and deviations in the measurements exist between DIN / DIN EN / DIN EN ISO and ISO. You can find a detailed overview in our technical handbook. The relevant Norms available from stock are highlighted.

Example item no. 917-2-8 DIN 917 - A2 - M8

Please note that all dimensions will be delivered without a thread groove. Products with a thread groove starting from M10 on are available on request. Hexagon domed cap nuts, high type can be found as DIN 1587 and prevailing torque type hexagon domed cap nuts with non-metallic insert can be found as DIN 986 in this catalogue. Hexagon screw caps with pipe thread can be found as WS 9626 in this catalogue.

Hexagon nuts DIN 934 with fine pitch thread, left hand thread as well as UNC/UNF, with AD2000-W2 and made of special materials can be found on the following pages. Please note that nuts according to DIN 934 up to M24 will be delivered as standard in A2-70 and A4-80. The material A2-80 can be found on one of the following pages in this catalogue. Hexagon nuts with changed wrench sizes according to ISO 4032 can be found on the following pages.

Example item no. 980-2-8 DIN 980 - A2 - M8

Please note that prevailing torque type hexagon nuts, all-metal similar to DIN 980 will be delivered in type Inloc with three-point pinch on the face, copper- and tin-plated. Prevailing torque type hexagon nuts, all-metal similar to DIN 980 type Biloc with three-point pinch on the flat and Treloc with each with three-point pinch on the edge, each copper- and tin-plated are available on request. Prevailing torque type hexagon nuts with non-metallic insert, high type can be found as DIN 982, thin type as DIN 985 in this catalogue.

Standardisation

What are standards for?

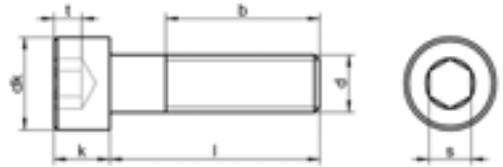

Standards are a method for standardising and unifying requirements, that are placed on material and non-material goods and services. Standardisation promotes national and international goods and services exchange and reduces trade barriers because standardised products are inter-exchangeable. This requires that the basic properties of standardised parts are determined from a central location and applied by manufacturers and traders.

What do DIN standards tell us?

As every standard, DIN standards also bring standardisation and simplicity with them. In case of a request it is sufficient to enter "DIN 912, M8x40, A4-70" to define several characteristics. A comparison of product requirements by sales partners is not necessary as both can be sure that they are talking about exactly the same product.

Screw standards define the following characteristics:

- Head shape
(e.g. hexagon, hexagon socket, countersunk head)
- Type of thread
(e.g. metric thread M, tapping-screw thread ST)
- Diameter
- Thread length
- Thread pitches
- Information about the technical delivery conditions

dk = head diameter

t = drive depth

k = head height

l = nominal length of the screw

b = thread length for screws with partial threads

d = thread diameter in mm

s = width across flats

This example shows which characteristics are given by the following designation:

DIN 912, M 8 x 40, A4-70

DIN 912 = hexagon socket head cap screw

M = metric thread

8 = thread diameter (d) of the 8mm screw

X 40 = nominal length (l) in mm

A4 = material class, stainless steel A4

-70 = Property class 70

P = the thread pitch is indicated with a number

If this number is missing, a standard thread is shown (M 8 x 40)

Only screws with a deviating coarse thread are indicated with a pitch, e.g. M8 x 1 x 40 identifies a screw with a fine thread.

Types of standards and issuers

Standards change dynamically due to innovation, globalization, increasingly faster development of markets and technical advancements. The creation of new business areas, shorter product lifecycles and the increasing convergence of technical sectors create a multitude of challenges and demands on national, European and international standardisation. To achieve a homogeneous European market, European standards have to be integrated in national regulatory bodies and the national standards repealed. This assumption is not obligatory for international standards. However, it is achieved to accept these international standards as EN standards without changes.

Standard	Information
DIN standard	<p>Publisher: German Institute for Standardisation = national, German standard</p> <p>DIN standards continue to be used in Germany for products and services that are not standardised to ISO EN or for which there is no demand for standardisation on an international level.</p>
ISO standard	<p>Publisher: ISO (International Organization for Standardisation). = international "ISO" (Greek for equal) standard. ISO standards are valid worldwide and serve to improve global trading.</p>
EN standard	<p>Publisher: European Committee for Standardisation = European standard</p> <p>Unlike ISO standards, EN standards are only valid in the EU. Identity of EN and ISO standards is to be created, in which existing ISO standards are adopted as EN standards unchanged with the ISO standard number; these will accordingly be designated as EN ISO. If this is not achieved on European standard level, individual EN standards will be created whose numbers deviate from the ISO standards.</p>
DIN - EN - standard	<p>Adopted mixed standards = national German edition of an EN standard adopted unchanged</p> <p>These are standards which state that the standard number identifies the same object in both DIN standard and EN standard.</p>
DIN - EN - ISO - standard	<p>Adopted mixed standards = national German editions of an EN standard adopted unchanged from ISO.</p> <p>These are standards which state that the standard number identifies the same object in DIN standard, EN standard as well as ISO standard.</p>
DIN - ISO	<p>Adopted standards = national German edition of an ISO standard adopted unchanged</p>

Standard conversions (DIN/EN/ISO) for fasteners

Standards are tested and changed at regular intervals. The conversion to DIN ISO and DIN EN is constantly advanced. Certain dimensions may change in some cases. Customers and suppliers must agree upon these conversions together. In the middle of 1993, there was a change on the width across flats for hexagon head screws and hexagonal nuts (four dimensional ranges). For hexagonal nuts, width across flats were changed analogously and simultaneously the nut heights (type 1 ISO 4032).

It must be observed that the basic standards of DIN 267, parts 1, 4, 5, 9, 11, 12, 18, 19, 20 and 21 have been replaced by DIN EN ISO 3506. It was basically determined that EN will no longer be listed with five part numbers, but that the EN ISO regulation indicates that the ISO standard has been adopted as EN and is binding.

Details can be found in the following table "Standard parts comparison overview". Agreements and differences in standards for all of the standard products in this catalogue are detailed there.

	M 10	M 12	M 14	M 22
Previous width across flats according to DIN in mm	17	19	22	32
New width across flats according to DIN ISO 272 in mm	16	18	21	34

The new release and unification for pins and bolts should be pointed out (e.g. DIN 7 new EN ISO 2338, bolts DIN 1434, 1435, 1436 new EN ISO 2341).

In October of 1994, new EN-ISO standards for slotted-head and Philips screws containing dimensional changes were also adopted.

Standard part comparison overview DIN / EN / ISO

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Taper pins, untempered	DIN 1	DIN EN 22339	2339
	Parallel pins tolerance zone M6	DIN 7	DIN EN ISO 2338	2338
	Slotted cheese head screws	DIN 84	DIN EN ISO 1207	1207
	Slotted pan head screws	DIN 85	DIN EN ISO 1580	1580
	Retaining washers with lug	DIN 93	Standard repealed	
	Cotter pins	DIN 94	DIN EN ISO 1234	1234
	Slotted raised countersunk (oval) head wood screws	DIN 95	No new standard intended	
	Slotted round head wood screws	DIN 96	No new standard intended	
	Slotted countersunk (flat) head wood screws	DIN 97	No new standard intended	
	Washers, type A, without chamfer	DIN 125	DIN EN ISO 7089	7089
	Washers, type B, with chamfer	DIN 125	DIN EN ISO 7090	7090
	Spring lock washers with tang ends	DIN 127	Standard repealed	

Changes	Remark
Length l according to ISO incl. round end (to date according to DIN excl. round end)	Almost interchangeable
Length l according to ISO incl. round end (to date according to DIN excl. round end)	Almost interchangeable
New head heights for M1.6, M2 and M2.5	
New head diameter for M3 and M5	
	No dimensional changes, interchangeable
Nominal sizes based on thread diameter (ISO) instead of hole diameter (DIN), hardness classes changed	No dimensional changes
Nominal sizes based on thread diameter (ISO) instead of hole diameter (DIN), hardness classes changed	No dimensional changes

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Spring lock washers with square ends	DIN 127	Standard repealed	
	Curved spring lock washers	DIN 128	Standard repealed	
	Waved spring lock washers	DIN 128	Standard repealed	
	Spring washers, type A, curved	DIN 137	Standard repealed	
	Spring washers, type B, waived	DIN 137	Standard repealed	
	T-bolts with square neck	DIN 186	No new standard intended	
	American shape wing nuts	DIN 315 AF	No new standard intended	
	German shape wing nuts	DIN 315 DF	No new standard intended	
	American shape wing screws	DIN 316 AF	No new standard intended	
	German shape wing screws	DIN 316 DF	No new standard intended	
	Slotted capstan screws	DIN 404	No new standard intended	
	Slotted headless screws with chamfered end	DIN 427	DIN EN ISO 2342	2342
	Pipe nuts, type B, pipe thread according to DIN 228, Part 1	DIN 431	No new standard intended	

Changes	Remark
<p>Changed slot depths</p>	<p>Almost interchangeable</p>
<p>New width across flats according to ISO 272 at G1/8", G1/4", G1/2", G5/8"</p>	

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	External tab washers	DIN 432	Standard repealed	
	Washers for cheese head screws	DIN 433	DIN EN ISO 7092	7092
	Square taper washer for U-sections, 8% gradient	DIN 434	No new standard intended	
	Square taper washer for I-sections, 14% gradient	DIN 435	No new standard intended	
	Washers, square, for wooden constructions	DIN 436	No new standard intended	
	Hexagon nuts, low form	DIN 439	DIN EN ISO 4035	4035
	Hexagon thin nuts, with fine thread	DIN 439	DIN EN ISO 8675	8675
	Washers for wooden constructions, R shape = round hole	DIN 440	DIN EN ISO 7094	7094
	Washers for wooden constructions, V-shape = square hole	DIN 440	No new standard intended	
	Eye bolts	DIN 444	No new standard intended	
	Internal tab washer	DIN 462	No new standard intended	
	Tab washer with 2 tabs	DIN 463	Standard repealed	

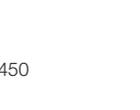

Changes	Remark
Nominal sizes based on thread diameter (ISO) instead of hole diameter (DIN), hardness classes changed	No dimensional changes, interchangeable
Changing hole size for M12 and M16	Almost interchangeable
Changing hole size for M12 and M16	Almost interchangeable
Changing hole size for M12 and M16	Almost interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable
Nominal sizes based on thread diameter (ISO) instead of hole diameter (DIN), V-shape with square hole not applicable in ISO, minimal dimensional changes	Interchangeable

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Tall knurled thumb screws	DIN 464	No new standard intended	
	Slotted knurled thumb screws, high type	DIN 465	Standard repealed	
	Tall knurled nuts	DIN 466	No new standard intended	
	Flat knurled nuts	DIN 467	No new standard intended	
	Retaining rings for shafts	DIN 471	No new standard intended	
	Retaining rings for holes	DIN 472	No new standard intended	
	Slotted nuts	DIN 546	No new standard intended	
	Two hole nuts	DIN 547	No new standard intended	
	Slotted set screws with flat point	DIN 551	DIN EN 24766	4766
	Slotted set screws with cone point	DIN 553	DIN EN 27434	7434
	Square nuts	DIN 557	No new standard intended	
	Square nuts, flat shape	DIN 562	No new standard intended	
	Hexagonal wooden screws	DIN 571	No new standard intended	

Changes	Remark
Design with slot, included as a replacement for DIN 465	
	Refer to DIN 464
	No dimensional changes, interchangeable
	No dimensional changes, interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Eye bolts	DIN 580	No new standard intended	
	Eye nuts	DIN 582	No new standard intended	
	Mushroom head square neck bolt	DIN 603	DIN ISO 8677	
	Knurled thumb screws, flat shape	DIN 653	No new standard intended	
	Half round rivets	DIN 660	No new standard intended	
	Countersunk rivets	DIN 661	No new standard intended	
	Adjusting rings	DIN 705	Standard repealed	
	Locking screws with hexagon socket, tapered thread	DIN 906		
	Locking screws with collar, exterior hexagonal, cylindrical thread	DIN 908		
	Locking screws with collar, hexagon socket, cylindrical thread	DIN 910		
	Hexagon socket head cap screws	DIN 912	DIN EN ISO 4762	4762
	Hexagon socket set screws with flat point	DIN 913	DIN EN ISO 4026	4026
	Hexagon socket set screws with cone point	DIN 914	DIN EN ISO 4027	4027

Changes	Remark
	DIN ISO 8677 was repealed again in 2002
Fine thread cancelled	No dimensional changes, interchangeable
	No dimensional changes, interchangeable
	No dimensional changes, interchangeable

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Hexagon socket set screws with half dog point	DIN 915	DIN EN ISO 4028	4028
	Hexagon socket set screws with cup point	DIN 916	DIN EN ISO 4029	4029
	Hexagon cap nuts, low type	DIN 917	No new standard intended	
	Slotted pan head screws with large head	DIN 921	No new standard intended	
	Slotted pan head screws with shoulder	DIN 923	No new standard intended	
	Square weld nuts	DIN 928	No new standard intended	
	Hexagon weld nuts	DIN 929	No new standard intended	
	Hexagon head screws with shaft	DIN 931	DIN EN ISO 4014	4014
	Hexagon head screws with thread up to head	DIN 933	DIN EN ISO 4017	4017
	Hexagon nuts	DIN 934	DIN EN ISO 4032	4032
	Hexagon nuts with fine thread	DIN 934	DIN EN ISO 8673	8673
	Stud bolts, screw-in end $e \approx 1d$	DIN 938	No new standard intended	
	Stud bolts, screw-in end $e \approx 1.25d$	DIN 939		

Changes	Remark
	No dimensional changes, interchangeable
	No dimensional changes, interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable
	No new width across flats
	No new width across flats
New width across flats for M10, M12, M14 and M22	Almost interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable
New width across flats for M10, M12, M14 and M22 New nut heights for M5 - M39	Almost interchangeable
New width across flats for M10, M12, M14 and M22 New nut heights for M5 - M39	Almost interchangeable

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Slotted countersunk head screws	DIN 963	DIN EN ISO 2009	2009
	Slotted raised countersunk head screws	DIN 964	DIN EN ISO 2010	2010
	Cross recessed countersunk flat head screws	DIN 965	DIN EN ISO 7046	7046
	Cross recessed raised countersunk head screws	DIN 966	DIN EN ISO 7047	7047
	Threaded rods	DIN 975	Standard repealed	
	Threaded bolts	DIN 976	No new standard intended	
	Hexagon nuts with clamping part (all metal)	DIN 980	DIN EN ISO 7042	7042
	Hexagon nuts with clamping part (non-metallic), tall shape	DIN 982	DIN EN ISO 7040	7040
	Hexagon nuts with clamping part (non-metallic), flat shape	DIN 985	DIN EN ISO 10511	10511
	Hexagon domed cap nuts with non-metallic insert	DIN 986	No new standard intended	
	Shim rings and support rings	DIN 988		
	Washers for timber connectors	DIN 1052		
	Washers for clevis pins	DIN 1440	DIN EN 28738	8738

Changes	Remark
New head diameter for M3 - M10 New head height for M3 - M8	Almost interchangeable
New head diameter for M3 - M10 New head height for M3 - M8	Almost interchangeable
New head diameter for M3 - M10 New head height for M3 - M8	Almost interchangeable
New head diameter for M3 - M10 New head height for M3 - M8	Almost interchangeable
	Refer to DIN 976
	Replaces DIN 975
New width across flats for M10, M12, M14 and M22 new nut heights for M6 - M36	Almost interchangeable
New width across flats for M10, M12, M14 and M22 new nut heights for M5 - M36	Almost interchangeable
New width across flats for M10, M12, M14 and M22 new nut heights for M3 - M36	Almost interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable
	DIN 1052 Timber Structures is not a pure product standard, mechanical fasteners described in DIN 1052 part 2
New exterior diameter of d8 - d20 and d24 - d100 new thicknesses of d5, d45, d55, d60, d100	Almost interchangeable

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Grooved pins, full length taper grooved	DIN 1471	DIN EN ISO 8744	8744
	Half length taper grooved pins	DIN 1472	DIN EN ISO 8745	8745
	Full length parallel grooved pin with chamfer	DIN 1473	DIN EN ISO 8740	8740
	Half length reverse grooved pins	DIN 1474	DIN EN ISO 8742	8742
	Grooved pins, third length centre grooved	DIN 1475	DIN EN ISO 8743	8743
	Grooved pins with round head	DIN 1476	DIN EN ISO 8746	8746
	Spring-type straight pins slotted	DIN 1481	DIN EN ISO 8752	8752
	Hexagon domed cap nuts, high type	DIN 1587	No new standard intended	
	Slotted nuts	DIN 1804	No new standard intended	
	Disc springs	DIN 2093	No new standard intended	
	Nuts for waisted bolts	DIN 2510	No new standard intended	
	Hose clamps	DIN 3017	No new standard intended	
	U-bolt	DIN 3570	No new standard intended	

Changes	Remark
Lengths according to ISO incl. round ends (according to DIN to date excl. round ends)	
Lengths according to ISO incl. round ends (according to DIN to date excl. round ends)	
Lengths according to ISO incl. round ends (according to DIN to date excl. round ends)	
Lengths according to ISO incl. round ends (according to DIN to date excl. round ends)	
Lengths according to ISO incl. round ends (according to DIN to date excl. round ends)	
New shape B (with introduction) for ISO, DIN to date only for shape A (with chamfer)	
Two chamfers for diameters equal to or smaller than 10mm (ISO), to date ≤ 6mm (DIN)	
New width across flats for M10, M12, M14 and M22	Almost interchangeable

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Spherical washers, type C	DIN 6319	No new standard intended	
	Conical washers, type D	DIN 6319	No new standard intended	
	Hexagon nuts, type B, height = 1.5d	DIN 6330	No new standard intended	
	Hexagon nuts with collar, height = 1.5d	DIN 6331	No new standard intended	
	Hexagon nuts, height = 3d	DIN 6334	No official standard	
	Spring washers for screw connenctions	DIN 6796	No new standard intended	
	Toothed lock washers	DIN 6797	Standard repealed	
	Serrated lock washers	DIN 6798	Standard repealed	
	Retaining washers for shafts	DIN 6799	No new standard intended	
	Parallel keys, tall shape A	DIN 6885	No new standard intended	
	Hexagon socket head cap screws	DIN 6912	No new standard intended	
	Hexagon head screws with flange	DIN 6921	DIN EN 1665	1665
	Blind rivets, type A, pan head	DIN 7337	DIN EN ISO 15983	15983

Changes	Remark
New width across flats for M10, M12, M14 and M22	Almost interchangeable
New width across flats for M10, M12, M14 and M22	Almost interchangeable
Simply published as a draft standard and later repealed	
Minimal changes for dimensions	Shape B (countersunk head) DIN EN ISO 15984

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Spiral pins, standard design	DIN 7343	DIN EN ISO 28750	8750
	Washers for screws with heavy clamping sleeves	DIN 7349	No new standard intended	
	Hexagon socket button head screws			ISO 7380
	Self drilling screws, hexagon head with collar	DIN 7504 K	DIN EN ISO 15480	15480
	Cross recessed pan head self drilling screws	DIN 7504 N	DIN EN ISO 15481	15481
	Cross recessed countersunk head self drilling screws	DIN 7504 P	DIN EN ISO 15482	15482
	Retaining nuts	DIN 7967	Standard repealed

	Hexagonal self-tapping screws	DIN 7976	DIN ISO 1479	1479
	Spring lock washers for cheese head screws	DIN 7980	Standard repealed	
	Cross recessed pan head tapping screws	DIN 7981	DIN ISO 7049	7049

Changes	Remark
Minimal changes for dimensions and tolerances	Almost interchangeable
	No dimensional changes, interchangeable
	No dimensional changes, interchangeable
	No dimensional changes, interchangeable
New head diameter and head height for ST2.2 - ST6.3	Almost interchangeable
New head diameter and head height for ST2,2 , ST3,5 and ST4,2 - ST6,3	Almost interchangeable
New head diameter and head height for ST2,2 , ST3,5 and ST4,2 - ST6,3	Almost interchangeable
New head heights for ST2,2 - ST8	Almost interchangeable
New head diameter for ST2.2 , ST3.5 and ST4.2 - ST6.3 New head heights for ST2.2 , ST2.9 and ST4.2 - ST6.3	Almost interchangeable

Figure	Designation according to standards	Standard (formerly)	DIN-EN DIN-EN-ISO	ISO
	Cross recessed countersunk head tapping screws	DIN 7982	DIN ISO 7050	7050
	Cross recessed raised countersunk head tapping screws	DIN 7983	DIN ISO 7051	7051
	Hexagon socket thin head cap screw	DIN 7984	No new standard intended	
	Cross recessed raised pan head screws	DIN 7985	DIN EN ISO 7045	7045
	Washers for steel structures	DIN 7989	No new standard intended	
	Hexagon socket countersunk head screws	DIN 7991	DIN EN ISO 10642	10642
	Snap rings for shafts	DIN 7993	No new standard intended	
	Cross recessed raised countersunk head wood screws	DIN 7995	No new standard intended	
	Cross recessed round head wood screws	DIN 7996	No new standard intended	
	Cross recessed countersunk head wood screws	DIN 7997	No new standard intended	
	Washers, exterior diameter 3xd (nominal thread diameter)	DIN 9021	ISO 7093	7093
	Weld pin	DIN 32501	DIN EN ISO 13918	13918
	Socket head cap screw, TX drive			14579
	Socket head cap screw with low head, TX drive			14580

Changes	Remark
Some head diameters and heights changed	Almost interchangeable
Some head diameters and heights changed	Almost interchangeable
New head diameter for M3 and M5 New head heights for M2,5 , M3,5 and M5	Almost interchangeable
New head diameters and head heights for M3 - M16 and M20	Almost interchangeable
Nominal sizes based on thread diameter (ISO) instead of hole diameter (DIN), hardness classes changed	No dimensional changes, interchangeable

General standards for the manufacture and delivery of fasteners made of stainless materials

Mechanical materials, technical delivery conditions for fasteners and stainless steel materials are detailed in various general standards. We summarised these in the following overview for you.

Standard	Edition	Title
DIN 267 - 2	1984 - 11	Mechanical fasteners; technical delivery conditions; design and dimension accuracy
DIN 267 - 6	1975 - 09	Mechanical fasteners; technical delivery conditions; designs and dimension accuracy for product class F
DIN EN 20225	1992 - 02	Mechanical fasteners; Screws and nuts; dimensions (ISO 225:1983); German edition EN 20225: 1991
DIN EN 20273	1992 - 02	Mechanical fasteners; Through holes for screws (ISO 273: 1979); German edition EN 20273:1991
DIN EN 27721	1992 - 02	Countersunk head screws; layout and testing of countersunk heads (ISO 7721: 1983); German version EN 27721:1991
DIN EN ISO 898 - 1	2009 - 08	Mechanical properties of fasteners made of carbon steel and alloyed steel - part 1: Screws with defined property classes - coarse thread and fine pitch thread (ISO 898 - 1:2009); German edition EN ISO 898-1:2009
DIN EN ISO 898 - 2	1994 - 02	Mechanical properties of fasteners made of carbon steel and alloyed steel - part 2: Nuts with defined test strengths - standard thread and fine thread (ISO/DIS 898 - 2:2009); German edition prEN ISO 898-2:2009
DIN EN ISO 898 - 6	1996 - 02	Mechanical properties of fasteners - part 6: Nuts with defined test strengths - fine thread (ISO/DIS 898 - 6:1994); German edition prEN ISO 898-6:1995
DIN EN ISO 3269	2000 - 11	Mechanical fasteners - Acceptance test (ISO 3269:2000); German edition EN ISO 3269:2000
DIN EN ISO 3506 - 1	2010 - 04	Mechanical properties of fasteners made of stainless steels - part 1: Screws (ISO 3506-1:2009); German edition EN ISO 3506-1:2009
DIN EN ISO 3506 - 2	2010 - 04	Mechanical properties of fasteners made of stainless steels - part 2: Nuts (ISO 3506-2:2009); German edition EN ISO 3506-2:2009
DIN EN ISO 3506 - 3	2010 - 04	Mechanical properties of fasteners made of stainless steels - part 3: Grub screws and similar fasteners not under tension (ISO 3506-3:2009); German edition EN ISO 3506-3:2009
DIN EN ISO 3506 - 4	2010 - 04	Mechanical properties of fasteners made of stainless steels - part 4: Tapping screws (ISO 3506-4:2009); German edition EN ISO 3506-4:2009
DIN EN ISO 10666	2000 - 02	Self drilling screws with tapping screw thread - mechanical and functional properties (ISO 10666:1999); German edition EN ISO 10666:1999
DIN ISO 8992	2005 - 09	Fasteners - general requirements for screws and nuts (ISO 8992:2005)
ISO 13715	2000 - 06	Technical drawings - workpiece edges of undefined shape - terms and drawing specifications

Thread

Standard	Edition	Title
DIN 13 - 1	1999 - 11	Metric ISO threads general purpose - part 1 Nominal dimensions for standard threads; nominal thread diameters from 1 to 68mm
DIN 13 - 51	2005 - 08	Metric ISO threads general purpose - part 51 Exterior threads with transitional tolerance field (previously threads for force fit); tolerances, limiting deviations, limit dimensions
DIN 76 - 1	2004 - 06	Thread runouts and thread undercuts - part 1 For metric ISO threads according to DIN 13-1
DIN 78	2001 - 03	Thread ends - screw extensions
DIN 3858	2005 - 08	Whitworth pipe threads for pipe screw fittings - cylindrical interior thread and tapered exterior thread - dimensions
DIN 7998	1975 - 02	Threads and screw ends for wood screws
DIN ISO 261	1999 - 11	Metric ISO threads general purpose - Overview (ISO 261:1998)
DIN ISO 262	1999 - 11	Metric ISO threads general purpose - Selection series for screws, nuts and bolts (ISO 262:1998)
DIN ISO 724	2010 - 01	Metric ISO threads for general use - basic dimensions (ISO 724:1993 + Corr. 1:2009)
DIN EN ISO 228 - 1	2003 - 05	Pipe threads for fasteners not sealing in the thread - part 1 Dimensions, tolerances and designation (ISO 228-1:2000); German version EN ISO 228-1:2003
DIN EN ISO 1478	1999 - 12	Tapping screw threads (ISO 1478:1999); German edition EN ISO 1478:1999

Drives

Standard	Edition	Title
DIN 475 - 1	1984 - 01	Width across flats for screws, fittings and mountings
DIN ISO 272	1979 - 10	Mechanical fasteners; Width across flats for hexagon head screws and nuts
DIN EN ISO 4757	1994 - 10	Cross recesses for screws (ISO 4757: 1983); German edition EN 4757:1994
DIN EN ISO 10664	2005 - 10	Hexalobular socket for screws (ISO 10664: 2005); German edition EN 10664:2005

Materials

Standard	Edition	Title
DIN 17440	2001 - 03	Stainless steels - technical delivery specifications for drawn wire
DIN EN 10088 - 1	2005 - 09	Stainless steels - part 1: Directory of stainless steels; German version EN 10088-1:2005
DIN EN 10088 - 2	2005 - 09	Stainless steels - part 2: Technical delivery conditions for sheet and belt from corrosion resistant steels for general use; German version EN 10088-2:2005
DIN EN 10088 - 3	2005 - 09	Stainless steels - part 3: Technical delivery conditions for semi-finished products, rods, bar rolled wire, drawn wire, profile and bright steel products made of corrosion resistant steels for general use; German version EN 10088-3:2005
DIN EN 10263 - 5	2002 - 02	Rolled wire, rods and wire made of cold dipped and cold flow pressed steels - part 5: Technical delivery conditions for stainless steels; German version EN 10263-5:2001
DIN EN 10264 - 4	2008 - 07	Steel wire and wire products - steel wire for cable - part 4: Wire from stainless steel; German version prEN 10264-4:2008

Tolerances

Standard	Edition	Title
DIN ISO 691	2007 - 04	Assembly tools for screws and nuts - Wrench and socket openings - Tolerances for general use (ISO 691:2005)
DIN ISO 965 - 1	1999 - 11	Metric ISO threads general purpose - Tolerances - Part 1: Principles and fundamentals (ISO 965-1:1998)
DIN ISO 965 - 2	1999 - 11	Metric ISO threads general purpose - Tolerances - Part 2: Limit dimensions for exterior and interior threads for general use; medium tolerance class (ISO 965-2:1998)
DIN ISO 965 - 3	1999 - 11	Metric ISO threads general purpose - Tolerances - Part 3: Limit deviations for construction thread (ISO 965-3:1998)
DIN ISO 965 - 5	2002 - 05	Metric ISO threads general purpose - Tolerances - Part 5: Limit dimensions for interior threads, adjusted to fire galvanised exterior thread with the highest dimensions of the tolerance field location h before applying the coating (ISO 965-5:1998)
DIN ISO 2768 - 1	1991 - 06	General tolerances; tolerances for length and angle dimensions without individual tolerance inputs; identical to ISO 2768-1:1989
DIN ISO 2768 - 2	1991 - 04	General tolerances; tolerances for shape and position without individual tolerance inputs; identical to ISO 2768-2:1989

The WASI stainless steel encyclopedia

Stainless steel main groups

The term "stainless steel" is a collective term for more than 120 different types of stainless steels. For many decades, a variety of different alloys were developed which offers the best properties for most diverse applications. These alloys have one characteristic in common: due to the chrome in the alloy they do not require any additional surface protection. This chrome component forms a colourless and transparent oxide layer on the surface that closes on its own with the assistance of oxygen contained in the air or water after surface damage. Stainless steels are summarised in DIN 17440 and DIN EN ISO 3506. Stainless steel alloys are basically divided into four main groups according to their crystalline structure:

Martensitic stainless steels

According to their structure, materials with 10.5–13.0% chrome and a carbon content of 0.2–1.0% are assigned to this group. Other elements can be added in the alloy. The ratio to carbon must permit heat treatment, the so-called annealing. This enables strength increases.

Ferritic stainless steels (so-called chromium steels)

These materials contain chrome percentages between 12–18% and have a very low carbon content of less than 0.2%. They cannot be hardened.

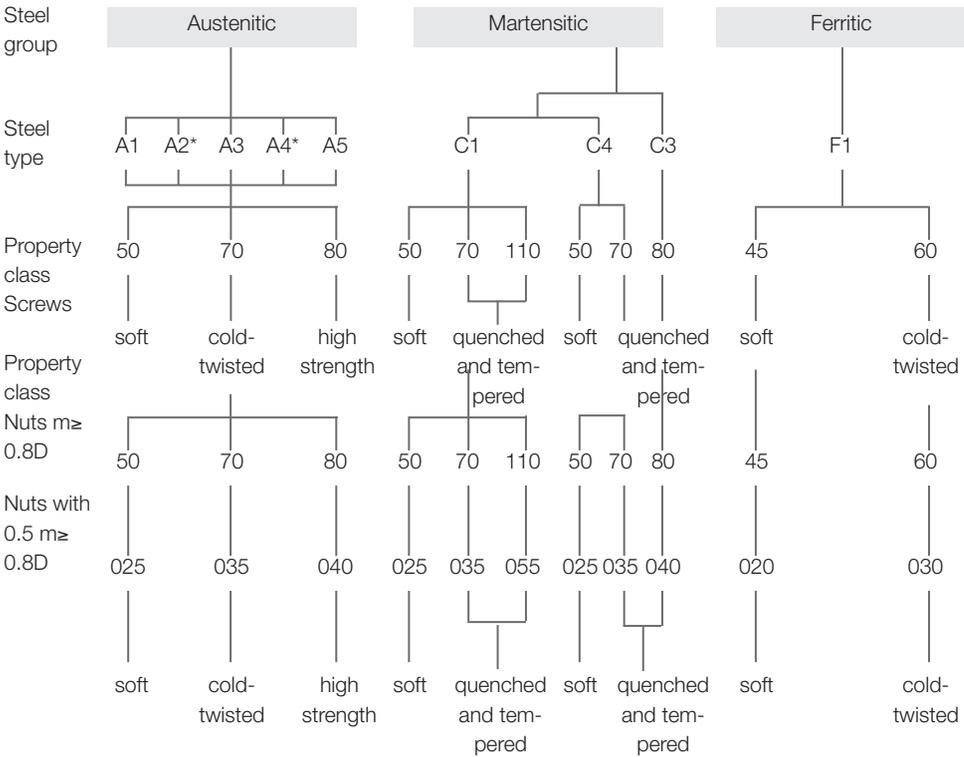

Austenitic stainless steels (so-called chromium-nickel / chromium-nickel-molybdenum steels)

The austenitic chromium-nickel steels offer a particularly cheap combination of workability, mechanical properties and corrosion resistance. They are recommended for many applications and are the most important group of stainless steels. The most important property of this steel group is the high corrosion resistance which improves with increasing alloying, particularly of chromium and molybdenum. A fine grained structure is needed for both – the ferritic and austenitic steels to achieve good technological properties. A final heat treatment with solution annealing at temperatures between 1000° C und 1150° C and subsequent water or air cooling is done to prevent the formation of precipitates. Unlike martensitic steels, austenitic steels cannot be hardened. The high strain capacity of austenitic steels guarantees good cold formability. The austenitic structure has a 15–26% chrome and 5–25% nickel content. An alloying addition of 2–6% molybdenum increases corrosion and acid resistance. This also includes so-called stabilised stainless steels that are alloyed with titanium or niobium. These elements prevent the formation of chromium carbides during welding.

Austenitic - ferritic stainless steels (known as DUPLEX - steels)

Duplex stainless steels, named after their two structure components, contain 18–25% chrome, 4–7% nickel and up to 4% molybdenum with an austenitic- martensitic structure.

Steel group / steel type / property class

*) *) Stainless steels with low carbon content (a maximum of 0.03%) can additionally be labeled with the letter "L" (for example: A4L - 80).

According to ISO 16048 passivated screws and nuts can additionally be labeled with a "P" (for example: A4-80P)

Labeling of non-corroding screws and nuts according to ISO 3506 parts 1 and 2 – status as of April 2010

Manufacturer's symbol

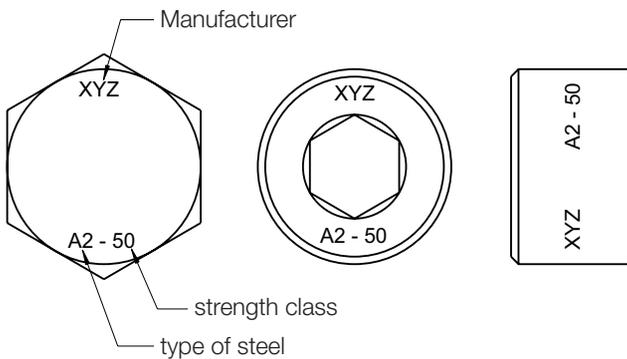

A manufacturer's symbol must be placed on all screws that are labelled with the strength class label during the manufacturing process.

Attaching a manufacturer's symbol is also recommended for screws that are not labelled with the strength class.

Labelling of hexagonal and cylinder screws according to ISO 3506-1

Hexagonal screws and cylinder screws with hexagon socket above a nominal diameter of M5 are to be clearly labelled according to the details below. Labelling is mandatory and must contain the type of steel and the strength class. As far as possible, this should be placed on the screw head.

Fig.: Excerpt from DIN EN ISO 3506-1

Labelling stud bolts

Stud bolts above a nominal diameter M6 must also be clearly labelled. The label is done on the non-threaded part and must contain the type of steel and the property class. If it is impossible to label this part of the screw, indicating steel type is permitted exclusively on the rounded end of the nut.

Labelling other screws

Other types of screws may, if possible and desired, also be labelled - however only on the head. Additionally other labels are permitted as far as they do not lead to confusion.

Countersunk head screws, button head screws and screws with flat cylinder heads do not fulfil the requirements of ISO 3506 for tensile and torsional strength due to their head geometries, where the shear area in the head is smaller in comparison to the tension cross-section in the thread. Such screws may be labelled with the type of steel, however not with the property class.

Manufacturer's symbol

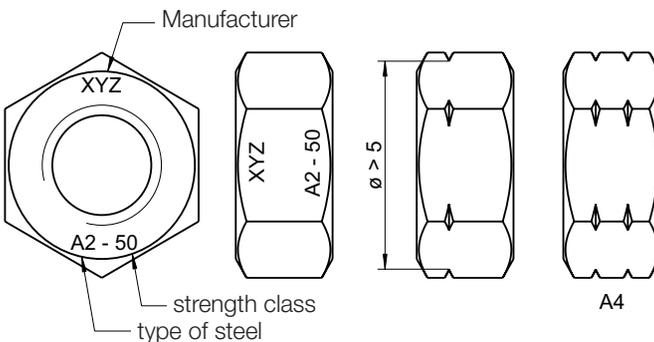

As far as technically possible, nuts must receive the manufacture's marking along with the property class. This marking is also recommended if the product class is not marked on the nut.

Labelling nuts according to DIN EN ISO 3506-2

Nuts with a nominal thread diameter above 5mm are to be labelled clearly according to the designation system. A label on only one contact surface is permitted and may only be placed as an indentation. A label can also be selectively placed on key surfaces. For nuts that are labelled with grooved and no property class is given, the lowest strength is based at a strength of 50 or 025.

Fig.: Excerpt from DIN EN ISO 3506-2

Nuts which do not fulfil the test strength due to their geometry or fine threads, may be labelled with the steel type, however not with a property class.

Material - definitions and comparisons - chemical compositions

The term "V2A" dates back to the year 1912 and described a product from the "2 austenitic series of tests". "V3A", "V4A" etc. was added to this later. Although these terms are today abbreviated to "A2", "A3", "A4" etc. and are generally used, these designations are not

clear. There is a material numbering system valid in all over Europe today.

Please note that a 1 : 1 relationship does not exist between AISI or UNS and the material numbers according to EN 10088. So for example, the material AISI

304L is the equivalent of material number 1.4306 although it shows the similar properties to 1.4301 and 1.4541.

18	X1CrNiMo-CuN20-18-7	1.4547	A	-	B, Ba	B, Ba	-	-	

1) according to DIN EN 10088-1:2005-09

2) A = Austenite; F = Ferrite; FA = Ferrite-Austenite (Duplex)

3) The property classes following the relevant lowest property class are achieved by work hardening using cold forming.

4) B = sheet; Ba = belt and the ensuing completed sheets; D = wire, drawn; H = hollow profiles; P = profiles; S = bars; W = rolled wire

5) only the bare metallic surfaces are valid. There is hazard for non-precious metals with possible contact corrosion

6) required corrosion resistance classes see 3.7

Materials selection for atmospheric exposure

Impact	Exposure		Criteria and examples	Corrosion resistances class			
				I	II	III	IV
Humidity, annual average U of humidity	SF0	dry	$U < 60\%$	x			
	SF1	seldom humid	$60\% \leq U < 80\%$	x			
	SF2	frequently humid	$80\% \leq U < 95\%$	x			
	SF3	permanently humid	$95\% < U$		x		
Chloride content of the atmosphere, distance M from sea, distance S from busy streets with use of road salt	SC0	low	Country, city, $M > 10\text{km}$, $S > 0.1\text{km}$	x			
	SC1	medium	industrial area $10\text{km} \leq M < 1\text{km}$, $0.1\text{km} \leq S < 0.01\text{km}$		x		
	SC2	high	$M \leq 1\text{km}$ $S \leq 0.01\text{km}$			x ¹⁾	
	SC3	very high	swimming pools, road tunnels				x ²⁾
contamination due to redox-active materials (e.g. SO ₂ , HOCl, Cl ₂ , H ₂ O ₂)	SR0	low	Country, city	x			
	SR1	medium	Industry			x ¹⁾	
	SR2	high	swimming pools, road tunnels				x ²⁾
pH value at the surface	SH0	alkaline (e.g. contact with concrete)	$9 < \text{pH}$	x			
	SH1	neutral	$5 < \text{pH} \leq 9$	x			
	SH2	slightly acidic (e.g. contact with wood)	$3 < \text{pH} \leq 9$		x		
	SH3	acidic (acid contamination)	$\text{pH} \leq 3$			x	
Location of components	SL0	inside	heated and non-heated interior spaces	x			
	SL1	exterior, open to rain	open air constructions		x ³⁾		
	SL2	exterior, covered	covered constructions		x ³⁾		
	SL3	outside, no access 4), ambient air has access	ventilated facades			x	

1) With regular cleaning of accessible constructions or direct cleaning, corrosion impact is significantly reduced so that the CRC can be minimised. For possible concentrations of materials on surfaces, the CRC must be selected from a higher level.

2) With regular cleaning of accessible constructions, the corrossions impact can be significantly reduced so that a reduction of the CRC is possible.

3) By limiting the lifetime to 20 years, a reduction of the CRC is possible, if a pitting corrosion of 100 µ is tolerated (no optical requirements)

4) Constructions are designated as non-accessible if their condition cannot be inspected or can only be inspected under difficult conditions and can only be reconstructed with huge efforts after a fire.

Fastener properties

Mechanical properties of fasteners - austenitic steel types

Excerpt from DIN EN ISO 3506-1:2010

Steel group	Steel type	Property class	Screws		
			Tensile strength Rm ^a min. MPa	0.2% yield strength Rp0.2 ^a min. MPa	Fracture elongation A ^b min. mm
Austenitic	A1, A2, A3, A4 and A5	50	500	210	0,6 d
		70	700	450	0.4 d
		80	800	600	0.3 d

a The tensile strength is calculate in relation to the strain cross-section (see DIN ISO 3506-1)

b The ultimate elongation is determined according to 7.2.4 on the relevant screw length and not on turned samples d is the nominal diameter.

Yield strength loads for screws with shafts

Reduced hardening capability created a higher yield strength for chromium nickel steels exclusively by strain hardening during cold forming e.g. thread rolling. The yield strength load of the following tables was calculated for you, based on DIN EN ISO 3506.

For standard metric threads

Thread	Stress area	Yield strength load for A2 and A4 in N		
		Strength 50	Strength 70	Strength 80
M 1.6	1,27	266,7	571,5	762
M 2	2,07	434,7	931,5	1242

Physical properties

The physical properties of some selected steel types are presented in the following table for comparison. Consider the higher thermal expansion and the lower thermal conductivity of austenitic steels. Their electrical resistance is higher than non-alloyed steels due to the alloy content. An important differentiating characteristic between ferritic/martensitic chromium steels and chromium nickel steels is their magnetisability. In

comparison to magnetisable chromium steels, austenitic steels show an extensively non-magnetisable behaviour in solution annealed state. Cold forming can lead to a structural change in austenitic steels so that limited magnetisability is subsequently present. The nickel content influences the magnetisability of austenitic stainless steel significantly, so that magnetisability even in cold formed condition can largely be prevented with higher nickel contents.

Steel type		Modulus of elasticity at 20 °C	Thermal expansion between 20 °C and		Thermal conductivity at 20 °C	Specific thermal capacity at 20 °C	Electrical resistance at 20 °C"	magnetisable
			100°C	400 °C

1) Small ferrite and/or martensite content resulting from cold forming increases the magnetisability

Chemical screw lock (gluing - clamping - sealing)

These products are offered either as liquid glue layers (with anaerobic hardening) or as pre-layers. The latter has the advantage that the layer must not be put on manually during assembly, but process-reliably onto the fasteners before delivery. This is also possible for bulk goods.

Chemical thread locks as a pre-layer are recommended for a reliable process. These can be divided into a glued and clamped thread lock:

DIN 267 part 27 - Adhesive coating

Microencapsulated adhesives: During screw-in, microcapsules are destroyed by pressure and/or shearing. Glue contained in the capsules is released. Contact with the hardener results in a chemical reaction (polymerisation), the glue hardens (adhesive bonding) and the desired locking effect occurs. Different hardening times must be observed depending on the product (effectiveness of the glue locking).

DIN 267 part 28 - Lock coating

Clamping thread lock media: A polyamide layer is placed on a thread section. A clamping effect is created during screw-in. The axial play between screw and nut thread is filled by the coating and this creates additional increase surface pressing to the opposite, uncoated thread edges. The desired locking effect takes place. Captive screw locks cannot prevent partial loosening of the screw, but can prevent a complete falling apart of the screw connection.

The first two till three thread pitches should be free of coating material to facilitate screwing in. Thread locking may be done as interior coating (nuts) as well as exterior coating (bolts). At the same time the coating, depending on the product, can be used on different materials and surfaces. Different temperature resistances of products must be observed. Chemical thread locks can provide an additional sealing function. Please note that the coating is placed "all around" and that additional requirements are defined.

FAQs

Can stainless steel corrode?

Basic pre-requisite for the creation of optimum corrosion resistance is a completely clean metallic surface. Stainless steels excel in their particular resistance against chemically aggressive, aqueous media. They generally have a mass fraction of the element chrome (Cr) of at least 12% and a mass fraction of the element carbon (C) of at most 1.2%.

The high corrosion resistance of stainless steels is due to their ability to form a so-called passive layer on the surface. This is a chrome rich metal oxide or metal oxide hydrate layer that separates the metal from the aggressive medium. The passive layer of a stainless steel is not something that cannot be changed, but instead creates an equilibrium between its composition and in its arrangement with the ambient medium over time. After mechanical damage of the metal surface, a new passive layer is generally formed independently. If a medium cannot create a sufficient passive layer, or if the existing passive layer is broken or completely destroyed chemically, corrosion damage may occur. The decisive alloying element for the capability of passive layer creation is chrome. Increasing the chrome content and adding other alloying elements such as molybdenum (Mo) increases the resistance for significantly more aggressive implementation conditions. Passivation is only effective for solute metal content of alloying elements. The corresponding corrosion resistance for this reason shows an augmentations-free matrix that is not depleted by the precipitation or the formation of intermetallic phases such as chrome or molybdenum. Stainless steels can be subject to wear surface corrosion and different forms of local corrosion. Wear surface corrosion is to be expected primarily in case of contact with acids and strong bases. In practice however, mostly different forms of local corrosion are more important.

What does extraneous rust mean?

Extraneous rust is understood to be the accumulation of iron oxide particles (rust) that can move to their rust-free surfaces in case of contact (wear) with non-stainless steels (even in bare versions). In correlation with humidity/condensate and environmental influences, so-called extraneous rust layer can occur. Extraneous rust happens with non-separated storage and processing of "black" and "white" steel, but it can be caused by tool wear. Extraneous rust is a purely visual problem and can be easily remedied with a fleece or an eraser.

What does stress corrosion cracking mean?

Media with components with specific effects, in particular chloride ions, can lead to a corrosive attack with crack-formation of stainless steels under simultaneous tensile stress influences, even if the steel without mechanical wear is sufficiently resistant to the medium. This appearance of stress corrosion cracking can be triggered by more than externally applied operation limited tensile stresses. Frequently the cause is rather related to internal stresses that are introduced during processing such as, during welding, grinding or cold forming. The danger of chloride-induced stress corrosion increases, as in the pitting and crevice corrosion with increasing temperature and chloride concentration. In terms of material, other determining factors have influence. Austenitic steels of the types 18/10 - CrNi and 18/10/2 - CrNiMo are particularly threatened by chlorine induced stress corrosion cracking at temperatures above 50 °C. However, by increasing the molybdenum and particularly the nickel content, resistance can be significantly increased. Even ferritic, ferritic-austenitic and stainless steels are comparatively less sensitive.

How does vibration corrosion happen?

The vibration strength of all stainless steels is more or less lowered by additional chemical attacks. The reduction of vibration strength depends on the attacking media and the number of axes of the occurring changing loads.

When does contact corrosion occur?

The possibility of contact corrosion exists when two metals with different free corrosion potentials are electrically connected to each other in a corrosive medium. The metal with the lower free corrosion potential can be polarised at least to higher potentials and thus be more susceptible to attacks. Even for large differences between the free corrosion potentials of the involved metals, contact corrosion does not necessarily appear. This depends on the electrochemical behaviour of both metals.

The conductivity of the medium and the surface behaviour of the participating metals are also important. If the "less precious" metal has a much larger surface than the "precious" metal and the corrosive medium has a high conductivity, the danger of corrosion damage is less. However, contact between a "non-precious" metal with a small surface and a "precious" metal with a larger surface is to be avoided. Stainless steels generally have a high free corrosion potential and are thus hardly subject to an increased contact corrosion hazard. It happens significantly more often that contact corrosion occurs for other metals with lower free corrosion potential when connected with a stainless steel.

What causes pitting and crevice corrosion?

Pitting and crevice corrosion is in practice mostly caused by contact with chloride ions. The more rarely occurring halides bromide and iodine can also be triggers. Pitting corrosion is introduced by the interaction between halogenide ions and the passive layer, whereby the passive layer is completely broken through. Needle-like crevices form. As they expand, pitted areas with different shapes occur.

The danger of pitting corrosion increased with increasing concentrations of halogenide ions, higher temperatures and increasing the electrochemical potential of the steel. Crevice corrosion occurs in crevices where fluidic exchange with the environment is limited. Such crevices are construction or operation related and occur e.g. in flanges, on pipe scrap marks, under seals, screw heads or also under incrustation. The corrosion mechanism is much the same as pitting corrosion.

Additional influencing factors are the crevice geometry and the type of crevice formation materials. Crevice corrosion occurs under considerably lower corrosion loads than pitting corrosion and should be prevented as much as possible in chlorine containing media by design measures. For homogeneous alloying element distribution the pitting and crevice corrosion resistance of a stainless steel can be approximately estimated by the sum "W": $W = \% \text{Cr} + 3.3 \times \% \text{Mo} + 30 \times \% \text{N}$ or $W = \% \text{Cr} + 3.3 \times \% \text{Mo}$ The influence of the alloying element nitrogen is however more complex than this relationship expresses. The high effectiveness expressed with factor 30 is completely meaningful only for highly-alloyed steels with an increased molybdenum content. Non-metallic impurities, above all sulphide precipitates, support pitting and crevice corrosion if they are on surfaces. The smoothest possible surface can be an advantage that further impedes the adherence of deposits that could lead to crevice corrosion. High pitting and crevice corrosion resistance is achieved only with seamless surface properties e.g. on a bare metallic surface. For this reason, discolouration and scaling after welding, foreign metal wear, extraneous rust, grinding agent residue and the like are to be thoroughly removed.

What does "intercrystalline" corrosion mean?

Intercrystalline corrosion is an attack along the so-called grain boundaries, during which the grains themselves are not or hardly removed. Attack of the grain boundaries can occur to an extent that individual grains of material are removed from the grain matrix causing the structure to lose its integrity. The cause of intercrystalline corrosion for stainless steels are precipitates from chromium rich carbides at the grain boundaries that create chrome depletion in the boundary areas.

The zones of low chromium content are not resistant enough to most aggressive media and can quickly go into solution. The chromium carbide precipitates require a specific carbon content and occur in temperature ranges between 500° C and 800° C, such as e.g. during heat treatment or welding processes. To prevent a chromium carbide precipitate, one can lower the carbon content of a stainless steel to below 0.03% or bind the available carbon using so-called stabilising elements such as titanium (Ti) or niobium (Nb) that have a greater affinity for carbon than chrome. If chromium carbides have occurred, these can be dissolved again by exposure to solution annealing above 1050° C.

For unstabilised ferritic steels, an existing susceptibility to intercrystalline corrosion can be removed by annealing between 800° C - 885° C. For this, rediffusion of chrome from inside the grain can remove the chrome depletion in the grain boundary areas.

Why did the screw and nut get "jammed"?

The source of seizing with the nut is often screwing at too high speed. This can occur by using a power screwdriver with torque and speed that are too high during screwing. A max. turning speed of 25 rpm is recommended when using a power screwdriver. To prevent jamming, lubrication layers such as Gleitmo are used to reduce or eliminate friction.

Compatibility with other materials

In practical use, there is often a need to combine stainless steels with different metallic materials in one component. Electrically conductive connections of these materials with each other and the presence of a conductive medium cause a corrosion reaction that may lead to damage due to contact corrosion. According to DIN 50 900 part 1, contact corrosion is an "accelerated corrosion" of a metallic area that can be traced to a corrosion element, consisting of the pairing of a metal/metal or metal/electron-conductive body with different free corrosion potentials. The accelerated corroding metallic area is the anode of the corrosion element hereby.

The corrosion occurring during contact corrosion is often equal or unequal surface wear. Surface wear, or loss of mass of the "less precious" partner in this combination depends on the size of the element current flowing ("potential difference current") and the degree of the internal corrosion for the mixing potential existing in the metal combination. The element current is a complex factor that depends on the geometrical arrangement, the size of the electrode surfaces in contact with the medium, the resting potentials and the polarisation resistances of the partners as well as the electrolyte resistance of the medium. For the evaluation of the corrosion danger of the non-precious partner in a material combination, the height of the potential difference (potential difference) between the connected materials is not responsible, but rather the characteristic of the half current density curves of both materials in the aggressive media.

The corrosion current density (element current) and therefore the contact corrosion attack can change in the order of several magnitudes for the same potential difference depending on the characteristics of the anodic and cathodic half current density curves. Decisive is whether the anodic or cathodic reactions are impeded or not by e.g. cover layers created. If detrimental surface conditions (large cathode / small anode) are present in a well conducting corrosive medium then contact corrosion can lead to corrosion damage. Thus, the basic theory of the electrochemical series and also practical electrochemical series is unsuitable for estimating the danger of materials for conductive contact with each other in practice. Determining the danger of a material combination exactly requires corrosion experiments according to DIN 50 919.

Classification of degrees of resistance in different groups

Resistance	Evaluation	Substance loss in g/m ² h
A	resistant to surface corrosion	< 0,1
B	little attack	0,1 - 1,0
C	poor resistance	1,0 - 10
D	not resistance	> 10
L	Danger of pitting, crevice and stress corrosion cracking	

WASI General Terms and Conditions of Business

1. Exclusive validity and recognition of our Terms and Conditions of Business

1.1 All our offers are based on our general Terms and Conditions of Business. We take purchase orders exclusively on these Terms and Conditions of Business. We reject the validity of any and all general Terms and Conditions of Business of our contractual parties.

1.2 With the ordering or the acceptance of deliveries, the Orderer recognises the validity of our general Terms and Conditions of Business not only for that transaction, but also for all future transactions.

2. Offers – Side agreements – Contractual subject matter

2.1 Our offers are subject to confirmation in the sense that a contract is only concluded if we accept the purchase order.

2.2 Side agreements for our offers and order confirmations require our written confirmation to be valid.

2.3 On conclusion of consecutive delivery on sale, call-offs for delivery of goods ordered and type classification for approximately equal monthly amounts are to be given to us. If the Orderer does not call off or classify in due time, we shall, after having set a grace period to no avail, be entitled to classify ourselves and deliver the goods or, at our choice, rescind the part of the contract which is still outstanding or demand compensatory damages due to non-performance.

2.4 Subject to compliance with the relevant statutory regulations, we shall be entitled to process all data protected by law relating to the Orderer.

3. Quality of the goods

3.1 Images, drawings, weights and dimensions contained in catalogues, price lists or other printed material constitute approximate data as are custom in the industry. We reserve the right to make structural and material deviations that are technically required or urgently required by the design, insofar as such changes are reasonable for the Orderer with consideration to the intended purpose of the goods.

3.2 We reserve the right to over-deliver or under-deliver by up to 10 %.

3.3 Inspection and approval certificates will be provided only upon request and at extra cost.

4. Reservation of the right to rescind

4.1 We are entitled to withdraw from the contract if its fulfillment meets with technical difficulties that are insurmountable or would require a disproportionate effort to surmount in comparison to the value of the items to be delivered, or if we become aware of circumstances that cast doubt on the credit-worthiness of the Orderer.

4.2 Instances of Force Majeure shall also entitle us to withdraw from the contract. Force majeure shall include strikes, lock-outs, and similar events.

5. Prices

5.1 Our prices are quoted for delivery ex works and do not include VAT, packaging, customs, incidental import charges and insurance.

5.2 We reserve the right to subsequent billings in the event that alloy surcharges change after contract conclusion and before delivery.

5.3 The minimum order value amounts to 100.00 (€) net in the case of purchase of full packaging units.

6. Terms of delivery

6.1 Terms of delivery are only to be deemed as approximately agreed upon. If delivery is delayed by circumstances beyond our control, particularly by Force Majeure, interference by public authority, industrial action, difficulties in materials procurement, production disruptions, specific wishes of the Orderer and the like, the delivery term shall be extended for the duration of the hindrance. This also applies to delays that occur because we receive deliveries either incorrectly or not in time though no fault of our own. A hindrance that exceeds a duration of six weeks and whose end is impossible to predict entitles the Orderer and us to withdraw from the contract insofar as it cannot be fulfilled by us due to the hindrance.

6.2 The Orderer shall not be entitled to damages if the time of delivery has been exceeded or delayed, unless failure to meet a deadline is not based on intent or gross negligence of our management or one of our employees.

7. Defect Liability

7.1 We will in no case guarantee that ordered goods are suitable for the purpose intended by the Orderer or that they can be used or processed under the conditions given at the Orderer's premises or those at the premises of its customers. The Orderer is in fact obli-

gated to test this prior to use or processing. We are not liable for mistakes resulting from the documents submitted by the Orderer (drawings, samples and the like).

7.2 Any defect-related complaints have to be made in writing. Defects of one part of the delivered goods do not entitle the Orderer to object to the entire delivery. If such a notification of defects is duly substantiated, we will deliver replacement goods that are free from defects. The Orderer shall return the goods objected to upon demand at our cost. In this case, there is an entitlement for replacement delivery only after we have received the returned goods. In place of delivery of replacement goods, we may also choose to rework the defective goods, change the contract with regard to the defective goods or reduce the purchase price. The Orderer may set a term of ten days for us to exercise this right of choice, starting from the date of our receipt of the defective goods at the earliest. If we do not exercise this right of choice within this deadline, it shall be passed to the Orderer.

7.3 We shall only be liable for possible damages only in the event of intent or gross negligence of an employee or an agent. Damages will in these cases also be limited to damages that are predictable and typical to the subject matter of the contract. We are not liable for damages to any other objects of legal protection of the Orderer caused by the delivered item. Excluded from the above is the liability for damage arising from injury to life, limb or health, which can be attributed to negligent breach of duty by us or negligent breach of duty by one of our representatives or agents.

7.4 The limitation period for claims and rights on account of possible defects amounts to 1 year irrespective of legal grounds. This does not apply to cases under § 438 Para. 1 No. 1 Civil Code, § 438 Para. 1 No. 2 Civil Code, § 479 Para.1 Civil code or § 634a Para. 1 No.2 Civil Code. The terms in the above sentence are subject to a limitation period of 3 years. The aforesaid periods of limitation do not apply to cases of intent. They also do not apply to cases of fraudulent concealment of a defect. The periods of limitation also do not apply to cases of damage to life, limb, health or freedom, claims according to the product liability as well as grossly negligent breaches of duty or breaches of essential contractual obligations.

8. Liability for product risks and for errors during contract negotiations

8.1 If damage arises from danger inherent to the goods, whether this danger is caused by a defect of the goods or connected to its contractual condition, or if damage arises from the fact that there was no or insufficient warning against this danger, the injured party cannot assert a claim toward us from damages resulting to the party unless the damage was caused by intent or gross negligence of our management or one of our employees. Excluded from the above is the liability for damage arising from injury to life, limb or health, which can be attributed to negligent breach of duty by us or negligent breach of duty by one of our representatives or agents.

8.2 We accept liability for consequences arising from errors made during contract negotiations, in particular for consequences arising from insufficient or incorrect consultation provided to the Orderer only if these consequences are caused by intent or gross negligence of our management or one of our employees.

9. Invoices – Payment

9.1 We will issue an invoice as soon as the ordered goods are ready for shipment or pickup. Delays in shipment or pickup of the goods that we are not responsible for do not postpone the date on which payment of the invoice is due.

9.2 Our invoices are payable in euros (€) and without deduction immediately after the date of the invoice.

9.3 Subject to a reminder, the Orderer will be in default no later than 30 days after receipt of an invoice. With the beginning of the default, be it by reminder or the above 30-day deadline, we will charge interest in the amount of 8 percentage points above the base rate; the right to claim a higher damage caused by delay shall be reserved.

9.4 If we become aware of circumstances that cast doubt on the creditworthiness of the Orderer, we are entitled to demand, at our discretion, advance payment or the furnishing of security. The same applies if the Orderer does not meet its contractual obligation to pay us. Upon occurrence of any of the foregoing events, all our accounts receivables with respect to the Orderer, including those from other transactions, shall become due immediately.

9.5 To the extent we accept checks or bills of exchange, such acceptance shall always be on account of payment, but never with the effect of discharge.

9.6 The Orderer is not entitled to offset any amounts against our claims for payment or to effect a right of retention with respect to amounts due to us.

The foregoing does not apply to offsetting with respect to receivables that are undisputed or legally effective and for the right to exercise a right of retention until fulfillment of such receivables.

10. Retention of title

10.1 We reserve the title to all goods delivered by us until complete settlement of the accounts receivable arising from the contractual relationship with the Orderer, including previous claims for payment subsumed into current invoices.

10.2 The retention of ownership of the Orderer is precluded if the goods delivered by us are combined and/or mixed. The processing shall take place in such a way that we are to be regarded as manufacturer. In case of processing of goods with goods of a different origin that are likewise subject to reservation of title extended to processing, we shall acquire joint ownership of the new item in the ratio of the invoice value of our goods to the other goods at the time of processing. The property resulting for us from processing, combination or mixing is to be treated legally like the original goods.

10.3 All amounts receivable of the Orderer arising from the resale of any goods in which we have a right of ownership or co-ownership shall pass to us immediately upon the conclusion of the sales transaction up to the amount of the invoice value, regardless of whether the goods are sold to one or several buyers without or after treatment, combination and mixing.

10.4 On demand, the Orderer must inform the debtors of the assigned amounts receivable of the assignment, announce the debtors and amounts they owe and submit to us the documents that we require for the enforcement of the assigned amounts receivable.

10.5 The Orderer may sell, process or mix with goods of a different origin goods title to which we retain in the course of ordinary business activity only.

10.6 If the Orderer fails to fulfil an obligation secured by the reservation of title on the due date wholly or in part, or if we become aware of circumstances which might endanger our rights, we are entitled to demand the return of the goods we delivered without having to withdraw from the sales contract pursuant to § 440 Civil Code or to grant a grace period for the payment according to § 323 Civil Code. The subject matter of the purchase contract and the obligations of the Orderer shall remain unaffected by such a demand and the surrender of the goods.

10.7 The retention of title is limited in that ownership of the goods shall be readily transferred to the Orderer and the assigned amounts receivable shall fall to the Orderer once all our amounts receivable from the business relation have been settled in full. We undertake, upon request of the Orderer, to release the securities of our choosing (goods and claims) to which we are entitled hereunder to the extent that their liquidable value exceeds the payments to be secured by more than 20 %, this at the request of the ordering party.

11. Place of fulfillment – Place of jurisdiction – Applicable law

11.1 Place of fulfillment for the delivery shall be the respective location of shipment of the goods; for the payment it shall be Wuppertal. Exclusive place of jurisdiction for any disputes arising out of or in connection with the contract, also in case of litigation with regard to bills of exchange and checks shall be Wuppertal. However, we are entitled to bring an action against the Orderer in another court having jurisdiction over the Orderer.

12. Ineffectiveness of individual provisions

12.1 If individual provisions of these general Terms and Conditions of Business should prove to be or become invalid, such invalidity shall not affect the remaining provisions.
